MONTHLY STATISTICAL SUMMARY · Vol. 60 · No. 10 October, 1982

Paper and Paperboard Production: Mixed Signals

Production of paper and paperboard in September 1982 continued the very modest uptrend it had begun in June. The trend of production, as measured by the two month moving average of the seasonally adjusted data, moved above the five million-ton level in September for the first time since March. Both paper and paperboard production showed the same trend. The trend rate of paper in September, for example, was 2.53 million tons, the highest since the 2.54 million tons shown in April. Paperboard, at 2.48 million tons, was at its highest level since March.

On the basis of the smoothed trend, overall production declined by 3.3% from the first to the second quarter of the year, then rose by 1.5% from the second to the third quarter. The trend of new supply showed a similar pattern, with a decline of 3.6% from the first to the second quarter and an increase of 0.8% from the second to the third quarter. For the entire nine month period, however, total paper and board production was 5.7% below the comparable 1981 total with most of the drop reflected in the second quarter of the year.

The patterns of production and new supply have been strongly influenced by the movements in total economic activity. Manufacturing production in the first nine months of 1982, at an index average of 138.5 (1967=100) was 8.9% below the comparable year-ago level. The real Gross National Product showed a 2.0% decline in the same period. During the year, the movement of real GNP has been relatively small. Real GNP in the third quarter of 1982 was 0.7% ahead of the first quarter level. During this interval, the contribution of business inventories moved from a decline of $15.4 billion (annual rate 1972 prices) in the first quarter to an increase of $0.7 billion in the third quarter, a swing of $16.1 billion. Final sales (GNP less change in business inventories) showed a 0.4% decline during this period. Manufacturing production during that period declined by 1.6%.

More precise measurements of the impact of economic activity on the paper industry are the special demand indexes shown on the yellow industry data sheet. This table shows the demand index

Continued on Page 2

Continued from Page 1

for paper was down 0.3% in the first nine months of 1982; new supply of paper was down 3%. The demand index for paperboard was down 6.9% in that period and production for domestic use fell 8.5%.

As expected, the pattern of paper production was aligned with that of the real Gross National Product during the first three quarters of 1982, while that of paperboard production moved more in line with manufacturing production. Paper production in the first nine months of 1982 was 3.3% below the comparable year-ago total; total paperboard production was down by 8.0%.

Among the paper grades, the newsprint and the printing/writing grades tended to show a somewhat stronger performance during the first half of the year than the other grades. Newsprint production is presently moving below the rates achieved in the first half of the year, reflecting reductions in inventories of newsprint at publishers. For the first nine months of this year, newsprint production was 2.8% below the year-ago total; earlier this year, newsprint production had shown a small gain relative to its 1981 levels.

The best performance, however, was shown in the printing and writing grades, where the nine month 1982 total was only 2.1% below its comparable 1981 level. One grade, coated paper, was slightly above the year-ago total, although the backlog of unfilled orders at the end of September was down about 22% from its year-ago level.

Production of bleached bristols, which is also included in the printing and writing paper grades, was down 11%, reflecting declines in virtually all the major sub-sectors of this grade. Packaging papers, which include several industrial products, such as multiwall shipping sacks, were down 6.9%. Production of tissue papers, the largest consumer paper product, was down by 3.6%.

The decline in paperboard production was also evident throughout the entire grade structure. Production of containerboard for domestic use showed a 9% decline, while boxboard for domestic use was down 8%. Production for export was down by 3%, with the September level about 8% below the August level. Exports of paperboard in the third quarter of 1982 were about 5% below their first half 1982 average.

The Fibre Box Association reported that shipments of fibre boxes in September amounted to 20.66 billion square feet, the highest level reached since March. On a seasonally adjusted basis, the September rate was slightly below that of both July and August. The FBA data show that the seasonally adjusted trend of production throughout 1982 has fluctuated in the narrow range of 19.1 to 20.2 billion square feet per month, with the September rate near the high end of this range. The nine month 1982 total was 5.8% below the comparable 1981 total. Although shipments declined sharply in

Nine Months	25,326	27,288	-7.2	893	1,424	-37.3	3.5	5.2

the last three months of 1981, continuation of the current rate of shipments through the remainder of 1982 would still leave the 1982 total about 4% below the 246 billion square feet shipped in 1981.

Inventories of containerboard at mills and plants in September 1982 continued the downtrend evident during most of this year. As of the end of September, total inventories were equivalent to 6.7 weeks of supply at September rates of consumption, compared to 9.4 weeks of supply at the beginning of the year. The actual reduction of inventories amounted to 328,000 tons. Although inventories at mills have been declining since July, the October 1 level was still about 65,000 tons higher than that of the beginning of the year, while inventories at containerboard plants dropped about 394,000 tons.

The rising trend in total paper and board production evident in September did not carry forward into the early weeks of October. While there does tend to be some volatility in the weekly production data, the production of both paper and board in October normally tend to be seasonally high. On the positive side, weekly data on orders for printing paper indicate that they have held fairly steady during the past two months at levels well above the lows of the second quarter of the year. Similarly, data on unmade orders indicate some strength in the solid bleached board area, although unmade orders for recycled paperboard have not shown any particular strength.

Imports and Exports

Primary paper and paperboard imports in the first eight months of 1982 ran about 4.5% below their year-ago total. There was some recovery from the July low of 535,000 tons -- to an August level of 603,000 tons -- but these rates were well below the levels reached during most of the months in the first half of the year. The major imported product is, of course, newsprint, which was down by 5.3%. As noted in the production section, newspaper publishers have been reducing their inventories as the threat of work stoppages disappeared. Imports of printing/writing papers, however, have shown some increase; at an annual rate of over 700,000 tons in the first nine months of the year, they were 14.5% above the comparable year-ago total. Imports of uncoated groundwood, at 474,000 tons per year, were 7% above the year-ago. This is equivalent to 33% of the 1.42 million tons per year rate of domestic production indicated for the first nine months of 1982. Imports of uncoated book papers showed a 28% increase, although the 138,000 tons per year rate, even when combined with the 23,000 tons per year of writing papers, was equivalent to only 2% of the 7.8 million tons per year production rate of uncoated free sheet. Imports of coated papers showed a particularly strong growth trend, moving 44% ahead of the year-ago level. Here too, the tonnage rate was fairly low; at 56,000 tons per year, it was equivalent to a little over 1% of the 4.99 million tons per year rate of domestic shipments of these papers.

Continued on Page 12

Continued from Page 11

Primary exports were down more sharply, with the eight month total of paper and paperboard exports 11.8% below the comparable year-ago level. Paper exports, which had moved above the million ton level in 1981, were about 900,000 tons per year, with the July-August levels well below the totals reached in most months of the first half of the year. Newsprint exports, however, at 329,000 tons per year, were 30% above their year-ago level. The increase in these exports, largely reflecting the expansion of domestic newsprint capacity, accounted for about 6% of domestic newsprint production.

The total value of exports, including the construction grades, was about $4.5 billion per year in the first eight months of 1982. This was 11% below the year-ago level. The value of imports, at a rate of $5.4 billion per year, was down only 2.8%.

Sales and Earnings

Data on sales and earnings of 24 paper companies reported in the business press showed that third quarter sales, at $8.5 billion for these companies, held close to second quarter levels and were about 2.6% above the total reached in the first quarter of the year. Nonetheless, the nine month 1982 sales total was 7.2% below the comparable 1981 total. The year-to-year decline reflected not only the drop in paper and paperboard production, as noted in the earlier sections of this report, but also weakness in the non-paper sectors of these companies. Some of these companies have substantial operations outside the paper and allied products industry, including, but not restricted to, the wood products industries, where the earnings contractions have been large.

Earnings of these 24 paper and allied products companies in the third quarter of 1982 were above those of the first two quarters of 1982. Nonetheless, for the nine months as a whole, earnings were 37% below the comparable 1981 level. However, these earnings included some non-operating profits that could not readily be calculated on an after-tax basis. At the same time, they also excluded certain clearly described non-operating losses.

With earnings down by a greater percentage than sales, the margin on sales in 1982 for these companies moved well below their year-ago levels. Nonetheless, the sales margin of these companies in the third quarter of 1982, at 3.8%, was above the rates of both the first and second quarters, and well within one percentage point of the 4.5% margin shown by these companies in the third quarter of 1981. For the period as a whole, the 1982 margin averaged 3.5%, compared to 5.2% for the comparable period of 1981.

The data for these companies is shown in the lower panel on Page 10.

Paper Paperboard & Wood Pulp

MONTHLY STATISTICAL SUMMARY - Vol. 60 - No. 11 **November, 1982**

Paper and Paperboard Production Continues Modest Recovery

Paper and paperboard production in October continued the gentle uptrend that it has been following since mid-year. The October trend position (the September-October average of the seasonally adjusted data) was 60.9 million tons per year, about 0.3% above the September trend level and 5.8% above the low reached in the May-June period. Moreover, the October trend position was only 1.1% below the 1982 peak reached in March.

The production of paper and paperboard followed similar trends. The trend position of paper production in October, at 31 million tons per year, matched its March 1982 high, and was 7.1% above its June low. Paperboard production made its low for this cycle in July. Its October level marked a gain of 6.6% from the July low but was still 2.3% below the March 1982 high.

Since mid-year, the trend of paper and paperboard production has generally been somewhat stronger than that of total economic activity. For example, the Department of Commerce reported that the real Gross National Product in the third quarter of 1982 was unchanged from the second quarter level. Further, the third quarter final sales figure (GNP less inventory change) was 0.45% (1.8% per year) below the second quarter level. At the same time, manufacturing production, which generally measures the market for paperboard, was 0.2% below its second quarter level in the third quarter of 1982. Production of manufactured goods in October 1982 was 1.0% below its September level and 3.6% below its February 1982 peak.

These trends are summarized on the table on page 10, which shows the monthly trend of paper and paperboard production, the index of manufacturing production through October 1982 and the quarterly averages of the real Gross National Product for the first three quarters of 1982.

Preliminary Estimates of 1982 Production

On the assumption that production follows its current trend during the remainder of the year, the total would be 59.7 million

Continued on Page 2

AMERICAN PAPER INSTITUTE • 260 Madison Avenue, New York, N.Y. 10016

Continued from Page 1

tons, 4.1% below the 62.3 million tons produced in 1981 and 2.4% below the 1980 total. Paper production is pointing to a 30.3 million ton total, only 2.3% below its 1981 level and slightly above 30.2 million tons produced in 1980. Paperboard production, on this assumption, would be 29.3 million tons, 6% below its 1981 level and 5% below the total produced in 1980.

Paper and Paperboard Production by Grade

The table on page 3 shows the detail of production of paper and paperboard by grade, for 1980, 1981, the four months ending October 1982 as well as the year-to-date rate for 1982. The table shows that newsprint production rose in October, bringing the ten month rate to 5.1 million tons per year. During the third quarter of 1982 the seasonally adjusted rate of newsprint consumption averaged about 11 million tons per year, just about matching the 1980 and 1981 rates. Newspaper publishers reduced their inventories from 62 days of supply at the end of June 1982 to 48 days of supply at the end of September. This brought inventories in terms of days of supply below the year-ago level and compares to the 40 days of supply held at the end of September 1980. These trends suggest that U.S. newsprint production in 1982 will probably be about 3% under the record high reached in 1981.

Printing and writing paper grades is showing the strongest production trends in the industry. The October production level marked the second highest monthly total in 1982, pointing to a 1982 total of about 15.7 million tons produced,about the same as in 1981. Among the printing/writing paper grades, the strongest trend continues in coated papers, where production for the ten months of 1982 was 1.3% over its year-ago level. If the present trend in production continues, the 1982 total would move above 5 million tons, some 2% over the previous high of 4.9 million tons established in 1981. The demand for coated paper in 1982 has been largely supported by a strong demand for the publication and similar grades.

Production of the uncoated groundwood papers has shown strength in recent months, with the October level marking a high for a year. Should this trend continue, the 1982 production total will probably match the 1.46 million tons produced in 1981. The strength in demand for uncoated groundwood paper is also reflected in the trend of imports: in the first nine months of 1982 these imports were at an annual rate of 484,000 tons, 9% above the corresponding 1981 total. Exports, by the way of contrast, were down sharply, with the nine months rate averaging 64,000 tons per year. On this basis imports of uncoated groundwood papers accounted for about 26% of the total new supply.

The production of bleached bristols on the other hand has been relatively weak this year. For 1982 as a whole, production will probably amount to 870,000 tons, some 10% below its 1981 total. The weakness in demand is spread throughout the major grades, including in particular tag and file folder stock, index and printing bristols, and the coated bristols.

Continued from Page 2

Demand for the packaging and industrial papers continues to be weak. On the basis of current trends, the 1982 production total would amount to 5.2 million tons, some 6% below the 1980-1981 levels. However, output of bag and sack papers appears to be holding up fairly well, running close to year-ago levels.

As the table on page 3 shows, the major grades of paperboard are all tending to show somewhat similar trends. For example, the ten-month 1982 data show total production down 7.4%, with production of containerboard for domestic use down 8.6% and boxboard production for domestic use down 7.2%. The trend in the containerboard data may be compared with that of the fibre box shipments: for the first ten months of 1982, fibre box shipments were 5.6% below the corresponding 1981 total. However, third quarter shipments of fibre boxes, after adjustment for seasonal factors, were 2.6% ahead of their second quarter rate. If the seasonally adjusted rate of shipments continues at the October level through November and December, the 1982 shipments total would amount to 237 billion square feet, 3.7% below the 246 billion square feet shipped in 1981.

Output of the major boxboard grades is running well below year-ago levels. However, production of clay coated solid bleached foldding boxboard in the first ten months of 1982 was down only 4.3% while clay coated recycled board was down by 5.9%, compared to a 7.4% decline in total folding boxboard. Set-up boxboard production also showed a better than average performance, running 5.8% below the year-ago level. Among the bleached board packaging grades, plate dish and tray stock turned in the best performance, at 3.2% below its year-ago level.

Production of paperboard for export has held up fairly well. The annual rate for the first ten months of 1982 was about equal to the average rate for 1981 as a whole, although the ten-months 1982 total was 2.2% below the comparable 1981 total. Production for export of kraft linerboard has done particularly well, with the ten-month 1982 total only 1.4% below its year-ago level. Should production of this grade continue its present trend, the 1982 total would be in excess of 1.90 million tons and slightly above the 1.89 million tons produced for export in 1981.

Raw Materials

The production of paper grade wood pulps in 1982 has roughly paraleled the trend in total paper and paperboard produciton. For example, as the table on page 5 shows, total production of paper grade chemical wood pulp for the first nine months of 1982 was 5.3% below its year-ago level, compared to the 5.2% decline in paper and board production shown for the first ten months of the year. Production of dissolving grades, however, which are used outside the paper industry, was down sharply, with the nine month 1982 total 19% below its year-ago level and the total new supply down nearly 22%.

Continued on Page 12

Continued from Page 11

Production of paper grade chemical market pulp is showing a pattern similar to that of total wood pulp, with the production in the first nine months of the year 4.1% below its year-ago level. Imports were down sharply, while exports, which were 5.4% below the year-ago level, more or less followed the pattern of domestic production. However, the sharp decline in importshas brought the total new supply of chemical paper grade market pulp 11% below its year-ago level.

Consumption of wood pulp at paper and paperboard mills, based on API data, appears to be running 6.7% below its year-ago total. Waste paper consumption, by way of contrast, appears to be down only 3.7%. As is usual in times of weak demand, inventories of market pulp at pulp mills rose sharply while inventories of market pulp at paper and board mills, as shown in the lower panel of the table on page 5, have been reduced.

Capital Expenditures

The Department of Commerce reported capital expenditures by Paper and Allied Products companies in the second half of 1982 at an average rate of $6.48 billion per year, compared to $6.04 billion in the first half of the year. On this basis, Commerce noted expenditures for the year would be $6.28 billion. This pattern was much stronger than that shown for capital expenditures as a whole. Capital expenditures by all manufacturing companies in the second half of 1982 were estimated at $123 billion per year, compared to $126 billion per year in the first half. Incidentally, in terms of constant prices, Commerce noted that second half expenditures on new plant and equipment by paper industry companies were 4.8% above their first half rate.

In a recent report on capital spending, the McGraw-Hill Economics Department reported that capital expentiures by paper and pulp companies in 1983 would amount $6.6 billion, some 7% above their 1982 estimated total. They also reported that the these expenditures would rise another 4% in 1984. Again, the capital expenditures trend by pulp and paper companies was stronger than that for industry as a whole. McGraw-Hill reported that expenditures by total non-durable goods producers would drop 4% in 1983, while expenditures by durable goods producers would drop about 1%. The preliminary data are often adjusted in subsequent surveys.

Note: the American Paper Institute will publish the results of its 1982 Survey of Paper, Paperboard and Wood Pulp Capacity on December 15, 1982.

Paper Paperboard & Wood Pulp

MONTHLY STATISTICAL SUMMARY - Vol. 60 No. 12

December, 1982

Paper and Paperboard Production: Trend Eases

Preliminary data indicate that the trend position of paper and paperboard production in November, 1982 (the trend position is the two month average of the seasonally adjusted data, in this case October and November) eased to 60.6 million tons per year from the 60.9 million tons per year level reached in the previous month. In the previous 5 months the rate of production had been in a shallow, but steady, uptrend. For the July-November period as a whole, the seasonally adjusted rate of production averaged 60.2 million tons per year, compared to 59.5 million tons per year in the first six months of the year. For the first eleven months of the year, production was at a seasonally adjusted rate of 59.8 million tons per year, 4.6% below the comparable year-ago level.

If production holds at the November rate for the remainder of the year, the 1982 total would fall a little short of 60 million tons. This would be below the levels reached in the 1979-1981 period, but above those of any year prior to 1979.

Paper: The trend position of paper production in November, 1982 was 30.8 million tons per year, compared to 31.1 million tons per year reached in the previous month which was the high for the year.

The production rate for the first eleven months of 1982 was 30.4 million tons per year, 2.6% below the comparable 1981 rate, but above the 30.2 million tons produced in all of 1980.

Among the major paper grades, the production of coated papers continues to show the strongest trend. For the eleven months as a whole, coated paper production averaged 5.05 million tons per year, 1.8% above the eleven-month 1981 rate. If production maintains this pace for the remainder of the year, the 5.1 million ton production total would mark a new high for this grade.

Newsprint production, which had been in a strong growth trend during the past 3 years, has now moved below its first half 1982 rate. The 1982 total will probably be above the 5 million ton level but it will fall about 180,000 tons below the previous high of 5.24 million tons reached in 1981. The 1980 production

Continued on page 2

AMERICAN PAPER INSTITUTE • 260 Madison Avenue, New York, N.Y. 10016

Continued from page 1

of newsprint was 4.67 million tons. The recent decline reflects the weakness in business activity, as well as the pressure on publishers to reduce inventories of newsprint. Publishers have reduced inventories of newsprint by about 345 thousand short tons from the peak levels of March 1982. Newsprint consumption in the United States, however, has remained in a flat trend since March, at about 11.1 million short tons per year.

Most of the other grades of printing-writing papers held up fairly well during 1982, the major exception being bleached bristols. Production of bleached bristols in the January-November 1982 period averaged 869 thousand tons per year, 11.7% below the comparable year-ago total.

The packaging grades showed some strength in October and November, at a trend position of 5.3 million tons per year, about equal to the average rate for the eleven months of 1982, but 5.8% below the comparable 1981 total. Production of these packaging and industrial grades are influenced by levels of industrial production and to some extent by retail sales at non-durable goods stores. Industrial production in the January-November period was about 8% below its year-ago level, while retail sales at non-durable goods stores were down about 3½%, after adjustment for price increases.

Paperboard: The trend of paperboard production has moved downward again during the past two months. An intermediate high was made in September, with a trend position at 29.9 million tons per year, slightly below the March high of 30.6 million tons per year. The seasonally adjusted rate for the first eleven months of 1982 was 29.4 million tons per year, 6.7% below the comparable year-ago level. If production maintains its current rate, 1982 would be the first year since 1977 that the annual total fell below 30 million tons.

One relatively bright spot in the paperboard production figures has been production for export. For the entire eleven month period, the production of paperboard for export averaged 2.6 million tons per year, only 2.5% below the comparable 1981 level. If production for export holds at its November rate in December, it would reach 2.6 million tons; this would be about 1% below the 1981 total.

Production of containerboard for domestic use is, of course strongly influenced by corrugated box production, which in turn reflects industrial production changes. The November data from the Fibre Box Association show a slight easing in a rate of shipments of corrugated shipping containers. At its current rate, fibre box shipments in 1982 would total about 235 billion square feet, 4.5 below the 246 billion square feet shipped in 1981. Inventories at containerboard mills and box plants moved slightly

upward in October and November, with the level at the end of November equivalent to 7.5 weeks of supply. However in terms of both weeks of supply and actual tonnage levels, the rates were below those reached at the end of August.

Boxboard production for domestic use continued a steady trend. Total production of boxboard for domestic use in November 1982 was 2.6% below its year-ago level. For the entire January-November 1982 period, the rate of production was 5.3 million tons per year, 6.7% below its comparable year-ago rate. Production of folding boxboard for domestic use in the first eleven months of 1982 was 6.3% below its comparable year-ago figure.

Folding boxboard exports, which accounted for nearly 3% of the total, were 27% below their year-ago total. Most of these exports were solid bleached board, which showed a 26% decline over this period. Among the bleached board grades, production of milk carton board showed strength in November, moving 13% above its year-ago level. However, for the first eleven months of 1982, the production of milk carton board for domestic use was about 6½% below its year-earlier total, as was total production of all milk carton and food serve board.

Among the non-packaging boxboard grades, both wallboard, facings--used largely in residential construction--and panel board--used largely in automobiles--moved above their respective year-ago levels in November 1982. The November strength may have reflected the better trends in both housing starts and autos. For the entire January-November 1982 period production of these grades was down about 3½%.

Continued on page 11

Continued from page 10

Imports and Exports

Exports of paper plus paperboard, as reported by the Bureau of Census, have been moving in the relatively narrow range of 295,000 to 331,000 tons per month since the end of the first quarter of the year. The October total was reported at 298,000 tons. The year-to-date total for the entire January-October period was at an annual rate of 3.68 million tons, 9.0% below the comparable 1981 total.

With the exception of newsprint, all the major grades of paper and paperboard were below their year-ago totals. Total paper exports, for example, were down by 12.9%; paperboard, as reported by Commerce, 7.6%. Newsprint exports were up 24.4% in this period, reflecting both the impact of the increased U.S. capacity and the tie-in of some of the new capacity with foreign companies. Although Census reported a 7.6% decline in total paperboard exports, their reported total of unbleached kraft linerboard exports in the January-October period was in line with that shown by the API in its data on production of unbleached kraft linerboard for export. The ten months Census figure showed a 1.5% decline; the API data showed a 1.8% decline.

Total exports of paper, paperboard and products, including construction grades, as reported by Census were 9.1% below its year-ago level for the first ten months of 1982.

Imports of paper, paperboard and products, including the construction grades, were down 3.8% in the first ten months of 1982. Imports in October, however, were fairly strong: at 740,000 tons they were second only to the 746,000 tons imported in May and well above the 660,000 tons per month average of the August-September period. The October gain was paced by a strong increase in newsprint imports. Newsprint imports in October, at 587,000 tons, were second only to the 620,000 tons imported in May. For the first ten months as a whole, newsprint imports were at annual rate of 6.6 million tons, 5.7% below the comparable 1981 total.

Imports of printing and writing papers were 17.7% above the comparable year-ago total in the first ten months of 1982. Imports of uncoated groundwood accounted for about 67% of the total, and were 8.3% over their year-ago level. These imports accounted for 26% of the new supply of the uncoated groundwood paper in this period. Coated paper imports showed a strong gain of 72.2% in this period: however these imports only amounted to 67,000 tons a year, about 1% of the total new supply.

Imports of paperboard were down sharply, with the ten-month total averaging 108,000 tons per year, 22.6% below their year-ago level.

Continued from page 11

Capital Expenditures

The Department of Commerce has recently released new data on capital expenditures by U.S. industry. Commerce reported that such expenditures as a whole are weakening, with the 1982 total for all non-farm business down one-half percent in current dollars from 1981 outlays,(4.8% decline in constant dollars). The Department of Commerce further reported that expenditures for new plant and equipment by U.S. non-farm business in the first half of the 1983 will run below comparable 1982 levels in both current and constant dollars.

Companies classified in the paper industry reported lower capital expenditures than reported in previous surveys. For 1982 as a whole, capital expenditures by paper companies were revised downward to $5.96 billion from the previously reported $6.28 billion. This brought the 1982 level, in current dollars, 11.3% below the 1981 level and 12.4% below the all time high reached in 1980. In terms of constant dollars, the paper industry capital expenditures are estimated at 14% below their year-ago level for 1982 as a whole and 20% below their 1980 high. While Commerce did not show 1983 capital expenditures in terms of constant dollars for the paper industry separately, it did report that seasonally adjusted capital expenditures in current dollars by paper and allied products companies in the first half of 1983 would average $5.89 billion per year, 2.6% below the first half 1982 rate but roughly the same as second half 1982 rate.

Data by the Conference Board on the capital appropriations for those paper and allied products companies included in the thousand largest U.S. corporations showed appropriations sharply below their first quarter total of $2.1 billion in the second and third quarters of 1982: $465 million in the second quarter and $556 million in the third. Nonetheless, for the first three quarters the annual rate was over $4 billion second only to the 1981 high. These companies spent nearly $900 million per quarter on capital equipment in the first three quarter of the year, which after adjustments for cancellations, were at the rate of $520 million per year below appropriations. As a result, the closing backlog of unspent capital appropriations as of the end of the third quarter of 1982 amounted to $5.5 billion, equivalent to 1½ years of capital expenditures.

These figures suggest that while paper and allied products companies will probably spend a little less on new plant and equipment in 1983 than they did in 1981 or 1982, their total capital expenditures will still be maintained at a relatively high level.

Paper Paperboard & Wood Pulp

MONTHLY STATISTICAL SUMMARY - Vol. 61 No. 1

JANUARY, 1983

PAPER AND PAPERBOARD: 1982 TRENDS

An unusually large number of mill and machine shutdowns for vacation and maintenance at the end of 1982 brought the trend position of production (the 2-month average of the seasonally adjusted data) below the 60-million tons per year level for the first time since August. The trend paper and paperboard through 1982 could well be likened to the profile of a suspension bridge: rising in the first quarter; falling in the second; rising again in the third; and tilting downward again towards the end of the fourth.

This production trend reflected the general pattern of business, although with slight differences in timing. The real gross national product (real GNP), which measures the total output of goods and services on a constant dollar basis, moved downward in the first quarter of 1982, rose slightly in the next 2 quarters, only to fall again in the last quarter. Manufacturing production, a measure of trends in the markets for paper and paperboard packaging, moved downward throughout the year, with its fourth quarter average 4% below that of the first quarter. The fourth quarter 1982 level of real GNP was fractionally above its first quarter level but 1.2% below that of the fourth quarter of 1981, a pattern almost matched by the trend of paper and paperboard production.

For 1982 as a whole, paper and paperboard production amounted to 59.4 million tons, 4.3% below the revised 1981 total of 62.1 million tons. Real GNP was down 1.8%, but manufacturing production showed an 8.6% decline. Manufacturing of non-durable goods, however, which include the largest markets for paper and paperboard packaging, showed only a 5.3% decline.

Continued from Page 1

The table below shows the 1982 monthly trend of paper and paperboard production:

Paper and Paperboard Production Trends*
(Million tons per year)

January	58.9	May	58.1	September	60.5
February	60.9	June	57.4	October	60.8
March	61.4	July	57.7	November	60.5
April	59.8	August	58.9	December	59.3

*2-month average of the monthly seasonally adjusted data centered on the second month.

The demand for domestic production of paper and paperboard is, of course, also affected by trends of imports and exports. One grade, newsprint, accounted for 87% of the total imports of paper plus paperboard in 1982 and 81% of the total of all paper and paperboard imports including converted products and construction paper and paperboard. The rising trend of domestic newsprint capacity has affected the demand for imported newsprint; the 11-month 1982 import rate, at 6.58 million tons per year, was 6.0% below the corresponding 1981 rate. Some of the increase in domestic newsprint capacity was involved in foreign ownership, so that exports of newsprint in the first 11 months of 1982, at 314,000 tons per year, were 15.5% above their year ago level.

Imports of uncoated groundwood papers now comprise an important share of the total new supply of this grade (new supply is production plus imports less exports). At 516,000 tons per year, the 11-month 1982 import rate was 12% above its corresponding 1981 rate and accounted for about 27% of total new supply.

Kraft linerboard, is by far, the largest single export grade. In 1982, the API and Bureau of Census came up with virtually the same export total for this grade: The Census rate for the first 11 months of 1982 was 1.9 million tons per year, matching the API figure which reports linerboard production for export. However API reported that the 1982 rate was off only 1% from its 1981 level, while the Bureau of Census reported a larger decline because its 1981 figure was higher.

Imports and Exports: Bureau of the Census; data include products
Manufacturing Production: Federal Reserve Board
Real GNP: Bureau of Economic Analysis, Department of Commerce

Continued from Page 2

The table on the bottom of page 10 presents data on the quarterly trend of paper and paperboard production, imports, exports and new supply, together with annual data back to 1976. This table also presents data on the ratio of paper and paperboard new supply to real GNP and to manufacturing production for these same time periods.

The table shows that paper and paperboard new supply held near its 1980 level of 43,600 tons per billion dollars of the real GNP throughout 1981 and the first quarter of 1982. In the second quarter, the ratio fell sharply, but moved up to within 1% of its 1980 level in the last quarter. This suggests that the paper industry is keeping pace with general business activity. Relative to manufacturing production, the trend was even more favorable, with the fourth quarter 1982 ratio above that of any other shown on the table.

The trends shown by the total industry were, themselves the result of two distinctly different trends within the industry. Printing and writing papers find markets throughout the economy, with important markets in the service sectors as well as in the manufacturing sectors. In addition, printing and writing papers include some of the major growth products, such as office copy paper for the still-rising number of office copiers in the economy and computer printout paper for the ever-growing number of business and home computers. While there is widespread discussion of the long-term impact of electronic processing and distribution of information on paper demand, for the present, computer and computer generated demand for paper continues strong. Specifically, the production of uncoated free sheet papers, which include both these products, amounted to 7.84 million tons in 1982, 0.8% below the 7.9 million tons produced in 1981 and 2.2% below the record-high 8.0 million tons produced in 1980.

Continued on Page 12

Continued from Page 11

Coated paper shipments, largely reflecting strong demand for the publication (magazine) grades, rose to a record-high 5.0 million tons in 1982, 1.9% above the previous high established in 1981. Only bleached bristol production showed a sharp decline, with the 1982 total of 868,000 tons, some 11% below that of 1981, with all the major grades showing weakness.

Total production of printing and writing papers in 1982 amounted to 15.63 million tons, 0.7% below its 1981 high and a shade above the 15.58 million tons produced in 1980.

In contrast to the trend of printing and writing paper production, production of the packaging and industrial papers were 5.5% below their 1981 level. Production of paperboard was down by 6.3%, with containerboard production for domestic use, at 17.7 million tons, down 7.2% and boxboard for domestic use (excluding the unbleached kraft grades) at 5.2 million tons, down 6.3%. These declines were generally less than that of manufacturing production as a whole and roughly in line with the decline in production of non-durable goods.

While these declines were more or less consistent with the trends in the major markets for paper and paperboard, they nonetheless had a major impact on industry profits and on trends in expenditures for new plant and equipment. Federal Trade Commission data show that after-tax profits of paper and allied products companies in the first three quarters of 1982 were 45% below their year-earlier level with only a 4% decline in sales. The Department of Commerce reported that expenditures on new plant and equipment by paper and allied products companies totalled $5.96 billion in 1982, 11% below the 1981 total. Nonetheless, in terms of production, the paper industry remains strong relative to the total economy, as indicated by the figures presented above. This strength was reflected in a report by the Department of Commerce that paper and allied products companies intend to increase their expenditures on new plant and equipment by 3.5% in 1983, to $6.16 billion.

Paper Paperboard & Wood Pulp

MONTHLY STATISTICAL SUMMARY - Vol. 61 - No. 2

FEBRUARY , 1983

PAPER AND PAPERBOARD PRODUCTION TREND MOVES UPWARD

The paper industry got off to a brisk start in 1983, with production recovering smartly from the low levels of the fourth quarter. Preliminary data show the January 1983 production total at 5.2 million tons, 5.3% above the year-ago level. The trend position of production (2-month average of the seasonally adjusted data) was 61.0 million tons per year, which was about 2% below the record-high average rate attained in 1981. Preliminary data for February, based on two weeks production data suggests that the trend position moved up further, to 62.3 million tons per year.

The gains in production were spread throughout the grade structure, with the paperboard grades showing stronger recovery than the paper grades. This is an offset to the sharp declines in paperboard output that occurred in 1982.

Among the paper grades, the strongest gains appear to be in the printing and tissue paper sectors,according to preliminary data. The January estimate shows printing paper production at 16.1 million tons per year, 4.4% above the year-earlier level. In 1982, printing paper production showed the strongest pattern among any of the paper and paperboard grades; at 15.7 million tons, production was only 0.5% below the record-high 1981 level. This compares with a 4% decline in newsprint; 2% in tissue paper; and 5% in the packaging and other converting paper grades. Paperboard production was down 6% in 1982, with all the major grades showing comparable declines.

Demand for printing and writing papers reflects the improving pace of total business activity, including activity in the service sectors. In addition, the printing and writing papers continue to be supported by strong demand for computer papers and office copy papers. Coated paper, which finds its major markets in the advertising-sensitive magazine publishing and commercial printing, was the only major grade to show a gain in 1982: it was 1.8% above

Continued on Page 2

AMERICAN PAPER INSTITUTE • 260 Madison Avenue, New York, N.Y. 10016

Continued from Page 1

its 1981 level. In January 1983, coated paper production was at an unadjusted annual rate of 5.1 million tons, 5.7% above the January 1982 level.

On the negative side, production of bleached bristols continued to show a lack-luster performance, with the January 1983 total down 6.7% from its year-ago level. Production of these grades in all of 1982 fell 11% from the 1981 total.

Preliminary data indicate some recovery in the packaging grades. The production of total packaging and converting papers in January was up about 2% from year-ago levels, with unbleached kraft paper showing a 3.7% increase. In 1982, unbleached kraft paper production fell 6% from its 1981 level, largely reflecting weakness in the shipping sack and "other converting" grades.

Paperboard production, as noted above, showed a stronger pattern than paper in January 1983, rising 7.4% from its January 1982 level. The trend position of paperboard production in January was 29.9 million tons per year, which was above the average for all of 1982 but still 4% below the 1981 record-high average rate. Preliminary data for February, based on the production in the first two weeks of the month, indicate that the trend position moved to the 31 million tons per year level, which would bring the January-February rate to within 1% of its 1981 high.

Both the solid wood pulp and recycled grades shared in this gain. The production of the solid wood pulp grades in January, for example was up 7.3% and the recycled grades showed a 7.7% increase. The resurgence of recycled paperboard demand reflected a 6.7% increase in recycled folding boxboard production. In addition, the production of gypsum wallboard facings, which is closely related to the rapidly recovering housing industry, showed a 13.6% gain over the year-ago level. Total boxboard production for domestic use however, which includes the milk carton and food service grades, showed a gain of only 2.6% over its year-ago level in January.

Containerboard production for domestic use rose 7.5% above its year-ago level. This was consistent with the 6% gain shown in shipments of fibre boxes in January 1983, relative to its January 1982 level. The Fibre Box Association reported that the January 1983 rate of shipments adjusted for seasonal and work day factors, was at a rate of nearly 250 billion square feet per year, well above the rate reached in any month of 1982.

Continued from Page 2

Production of paperboard in January 1983 was supported by a fairly strong demand for exports. At 248,000 tons, production for export was 32.5% above its year-ago rate. Major strength was recorded in the kraft paperboard grade where the 180,000 tons total for export was 37% above its year-ago level. These exports were at a rate of 2.2 million tons per year, compared to the 2.4 million tons exported in the peak year 1980, when the People's Republic of China added an extra filip to the export market. Exports of bleached paperboard, as noted above, were also strong, running 14% above their year-ago level.

Imports and Exports

The Department of Commerce has now reported complete data on imports and exports of paper, paperboard and products for 1982. The data show that total exports of the paper and allied products industry were valued at $4.3 billion, 12% below the $4.9 billion exported in 1981. Imports amounted to $5.3 billion, off 4% from the $5.6 billion imported in 1981.

In tonnage terms, as the data on page 9 show, exports of paper plus paperboard, excluding construction grades fell 8.7% with the paper grades showing a 16.6% decline while paperboard exports dropped about 6%. For the important linerboard category, however, the Bureau of Census reported unbleached kraft linerboard exports down 0.2%. This was consistent with the API data, which showed a decline of 0.8%.

The Bureau of Census also reported that exports of wood pulp in 1982 were 7.7% below their 1981 level; this compares with an 8% decline in API data on export report. The two series continue to show differences in levels. Imports of the primary paper and paperboard grades in 1982 amounted to 7.5 million tons, 352,000 tons, or 4.5%, below the 1981 total. On a tonnage basis, the largest decline was in the imports of newsprint, which fell 446,000 tons or 6.4% below the 1981 level in 1982, to a level of 6.5 million tons. The decline in newsprint imports was offset to some extent by a 126,000 ton (20%) increase in printing and writing paper imports, spread across all major grades.

Raw Materials

The Pulp and Raw Materials Division of API reports that the production of wood pulp, at 49.4 million short tons, was 5.1% below the record-high 52.0 million tons produced in 1981. Production of the paper grade pulps, however, fell by 4.8% from 1981 to 1982. Imports fell more sharply with the chemical grade pulp imports dropping 9.7% to 3.3 million tons and the other grades down 8.5% to 167,000 tons.

Continued on Page 12

Continued from Page 11

In the market pulp grades, the 1982 production was reported at 5.7 million tons, 8.7% below the 1981 level and 12.6% below the 1980 high. Exports of market pulp, as reported by API, showed an 8.1% decrease, largely concentrated in the dissolving pulp grades. Market pulp exports of the chemical wood pulp grades in 1982 were down 5.9%, to 2.4 million tons. Despite the decline, this amount was high by historical standards, in that it was second only to the 2.6 million tons exported in each of the years 1980 and 1981.

The table on page 5 also shows data on consumption of wood pulp and waste paper at paper and paperboard mills. (The wood pulp data reflect estimates of consumption at paper and paperboard mills, excluding the wet machine board and construction paper and board mills.) Wood pulp consumption at paper and paperboard mills in 1982 amounted to 48.5 million tons, 4.6% below the comparable 1981 level. This compares with the 4.2% decline in paper and paperboard production.

The lower part of the table on page 5 also shows that the combined consumption of wood pulp and waste paper at paper and paperboard mills was down 4.2%, consistent with the reported decline in total paper and paperboard production. There were no data available on consumption of other fibrous materials - rags, straw, rope, hemp, etc. In the past this total has been well under 1 million tons per year.

Sales and Earnings

The dollar sales reported by 34 companies whose major products are in the paper and allied products industry amounted to $39.9 billion in 1982, 5.7% below the comparable 1981 total. This compares to the 4.2% decline in production of paper and paperboard reported for 1982. These companies accounted for about 65% of the total sales of paper and allied products companies as reported by the Federal Trade Commission; both series include sales of products other than paper and paperboard. (The Federal Trade Commission data for 1982 as a whole will not be available until April.)

Earnings of the 34 reporting paper companies in 1982 amounted to $1.0 billion, 51.9% below 1981, a much larger decline than sales.

The table on page 10 presents quarterly data on sales and earnings of these companies in 1982 and 1981 together with the calculated margin on sales in each of the quarters shown and the percentage changes in the quarterly data from 1981 to 1982. The sharp decline in total earnings reported for the fourth quarter of 1982 reflected the impact of a total of $178 million in losses reported by 5 companies. For those companies that reported a profit in the fourth quarter of 1982, total profits declined 41.6% in the fourth quarter of 1982 from their year-ago level; their sales margin in the 1982 quarter was 3.3%.

Paper Paperboard & Wood Pulp

MONTHLY STATISTICAL SUMMARY - Vol. 61 - No. 3

March 1983

Production of Paper and Paperboard Holds Early 1983 Gains

The trend position of paper and paperboard production in February 1983 (average of January-February seasonally adjusted data) was at the rate of 62.6 million tons per year. This was 2.6% above the relatively high rate of production in the comparable months of 1982, and compares favorably with the 62.3 million tons of paper and paperboard produced in the record-year 1981.

Data for the first two weeks in March point to a flattening of the production trend, with its rate holding close to the 62 million ton per year level.

Production of the printing/writing grades continue to show the strength evident during the past three years. The January-February total, for example, was 4.2% above the comparable 1982 level and compared favorably with the average rate in the record-year 1981. The largest gain among these grades in the January-February 1983 period was in coated paper, where production was 7.8% above its year-ago total. Its seasonally adjusted rate, at 5.2 million tons per year, was well above the 1982 record-high 5.0 million tons per year. These grades find their major markets in magazines and commercial printing, including the annual reports of corporations and the advertising brochures sent out by department stores and other advertisers requiring good color reproduction. These have been good growth markets.

The uncoated free sheet papers also were strong, showing a 4.2% gain over their year-earlier level. The seasonally adjusted rate of 8.2 million tons per year was above the average levels achieved in both 1981 and 1982. The major markets for these grades include office copy paper, computer printout paper, and other types of form bond. These papers are also used for books, commercial printing and in a host of other applications where written, printed or visual communication through hard copy is required.

Continued on Page 2

AMERICAN PAPER INSTITUTE • 260 Madison Avenue, New York, N.Y. 10016

Continued from Page 1

The other grades of printing paper showed a somewhat weaker performance. The production of groundwood paper in January-February 1983, for example, was 1.9% above its year-ago level, but the annual rate of production was well below that achieved in both 1981 and 1982. These grades are used primarily in directories and catalogs. Domestic grades of uncoated groundwood paper are meeting strong competition from imports, primarily from Canada. The Department of Commerce reported that imports of uncoated groundwood paper in January 1983 amounted to 53,000 tons, well above the total imported in January 1982 and accounted for nearly one-third of the total new supply (production plus imports less exports) of uncoated groundwood paper in that month. For 1982 as a whole, imports of uncoated groundwood paper accounted for 27% of the total new supply.

Thin and cotton fiber paper production held close to year-ago levels; these grades have been in a flat trend for some time. Production of bleached bristols moved further downward, with weakness evident in all the grades. Bleached bristols production dropped 11% from 1981 to 1982; production in the first two months of 1983 was nearly 10% below its comparable year-ago level.

The table on page 3 shows that tissue paper production for the first two months of 1983 was up some 7.5% over the year-ago total. While these are preliminary data, they do give evidence of a strong demand.

Data on the production of packaging grades of paper in the early weeks of 1983 had indicated some strength but more recent performance suggests a slackening in demand. The January 1983 total, for example was 5.5% above that of January 1982. Last year the rate of production in February and March rose sharply--the seasonally adjusted rate was 10% above the January seasonally adjusted level--but this year the February seasonally adjusted rate was about 2% below that of January. Thus, the data now show that the combined January-February total production of packaging and other papers was within 0.4% of the year-ago level.

Paperboard production also responded to the improvement in industrial production evident so far in 1983. Production of containerboard for domestic use, for example, was up 2.4%, according to the monthly data from API members. This compares to a 3.2% increase in shipments of fibre boxes, as reported by the Fibre Box Association. Production of kraft linerboard was sustained by a relatively strong demand for exports. API data show that the January-February 1983 export total was nearly 14% ahead of the comparable year-ago level, proceeding at a rate in excess of 2 million tons per year.

SOURCE: Producer Price Indexes -Bureau of Labor Statistics, U.S. Department of Labor # Computed by API

Continued from Page 2

While the production of boxboard for domestic use in the first two month's of 1983 just about matched its year-ago level, the annual rate was above the 1982 average. Production of bleached paperboard showed a 3.2% gain, supported in part by a 17% increase in production for exports. The January-February export rate was 590,000 tons per year, which compares very favorably with the 557,000 tons exported in the record-year 1981.

Production of recycled paperboard was also fairly strong, with the total for the first two months of 1983 4% ahead of its year-ago level. The resurgent building industry, which utilizes recycled paperboard in the production of gypsum wallboard facings, offered some support to this product.

Raw Materials

Production of wood pulp also got off to a good start in 1983. Data for January show the monthly total some 4.5% ahead of the January 1982 total. However, dissolving pulp production continued the decline evident during the past two years, with the January production total some 10% below that of January 1982. Production of chemical paper grade wood pulp showed a 6.3% gain.

Continued on Page 11

Continued from Page 10

Production of chemical paper grade market pulp was also strong in January, with the total some 3.8% ahead of its year-ago level and exports sharply higher than last year. However, the January export total compares to a relatively low January 1982 total; the annual rate for January 1983 was below the average rates for 1981 and 1982 as a whole.

The energy and raw materials division of API reports that the industry continues to increase its efficiency in the use of fuels. For 1982 as a whole, the average consumption of purchased energy and fossil fuels per ton of pulp and paper output was 27.5% below the comparable 1972 level and 3.5% below the 1981 level. When effects of changes in capacity utilization, environmental energy use and fuel mix are taken into account, the reduction in use of fossil fuel and purchased energy per ton of output since 1972 amounted to 35.5%. Comparisons of fourth quarter 1982 adjusted consumption data with the earlier data show a 38.1% decrease from the fourth quarter of 1972 and a 7.4% decrease from the fourth quarter of 1981.

Imports/Exports

The Department of Commerce reported imports of paper and products in January 1983 at an annual rate of $5.1 billion, 4.4% below the comparable 1982 level. On a tonnage basis, imports rose, with wood pulp, at 3.7 million tons per year, up 14.4% and paper, paperboard and products, plus the construction and wet machine board grades, up 1.8%. Newsprint imports, however declined by 6.9%.

The value of exports were also down, with the January rate of $3.8 billion per year 4.3% below that of January 1982. On a tonnage basis, exports of paper and paperboard, including the construction grades and products, showed a 13% gain.

Capital Appropriations

The Conference Board reported that the seasonally adjusted rate of capital appropriations by those paper and allied products companies included in the thousand largest companies in the U.S. rose 28% in the fourth quarter of 1982 from the average level of the preceding two quarters. The fourth quarter rate, however, was down sharply from the highs of the fourth quarter of 1981 and the first quarter of 1982.

Continued on Page 12

Continued from Page 11

The actual capital appropriations total in 1982 was $4.0 billion, 20% below the $5.0 billion appropriated in 1981, but above the levels reached in 1979 and 1980. Appropriations in the first quarter of 1982 accounted for 61% of the $4.0 billion appropriated for the full year; the annual rate of appropriations for the last three quarters of the year averaged only $2.2 billion per year.

By way of contrast, capital expenditures by these companies was in a steady upward trend during 1982; the 1982 total, plus a sizeable volume of cancellations in the fourth quarter of the year, was slightly less than the total appropriated. The divergence in the appropriations and expenditure trends brought the backlog of unspent appropriations to a $6.8 billion peak at the end of the first quarter of 1983, followed by a decline in the backlog to $5.2 billion at the end of the year.

In theory, a decline in appropriations should be followed within 6-9 months by decline in capital expenditures. However, in the case of a single industry, such as the paper and allied products industry, the backlog of unspent appropriations tends to distort this time relationship, as evident by the pattern shown by these data in 1982.

It is possible that the relatively large backlog evident at the end of 1982 can sustain expenditures near current levels for a good part of 1983, if cash flow permits. The Department of Commerce recently reported that capital expenditures by all companies in the paper and allied products industry in 1983 would total $6.09 billion, 2% above the $5.97 billion spent in 1982. The Department of Commerce figures showed that the rate of these expenditures will decline in the first quarter of 1983 from the fourth quarter 1982 level, but will then rise at a relatively strong rate during the last three quarters of the year.

MONTHLY STATISTICAL SUMMARY - Vol. 61 - No. 4 April, 1983

Paper and Paperboard Production Steady

Production of paper and paperboard has been fluctuating about a flat trend in recent months, at a level about 4% above the average 1982 level and roughly in line with the 1981 record-high. Last year, the production of paper and paperboard was fairly strong in the first quarter, followed by a declining trend through mid-summer and a modest recovery during the remainder of the year. First quarter 1983 production was 2.1% ahead of the comparable year-ago level. Preliminary data based upon production in the first three weeks of April suggest that the production rate in April will probably be close to its first quarter rate.

Paper production in the first three months of 1983 was 2.2% above its year-ago total. The seasonally adjusted annual rate was 31.7 million tons, compared to 30.4 million tons produced in 1982 and 31.0 million tons in 1981. Preliminary data for April suggest that paper production is holding near the first quarter level. The production of uncoated free sheet paper during the first quarter of 1983 was 6.6% ahead of its year-ago level and coated papers 7.4%. Uncoated free sheet new orders in the first quarter were 11% over their year-ago levels and coated paper new orders 9% ahead. The strong order patterns resulted in a significant increase in the order backlog during the first quarter.

Within the uncoated free sheet sector, the greatest strength was evident in the office copy grades, with form bond (largely computer print-out paper) showing significant gains. In the groundwood paper grades, publication and similar grades, used mainly for magazines and similar periodicals also showed good increases over year-ago levels. In addition, the production of bleached bristols advanced in March, bringing the first quarter 1983 total slightly above its year-ago level.

Tissue paper production during the first quarter was at 2.1% ahead of the first quarter 1982 output, a rate of production above both the 1981 and 1982 annual averages.

Continued on Page 2

AMERICAN PAPER INSTITUTE • 260 Madison Avenue, New York, N.Y. 10016

Continued from Page 1

The packaging grades of paper were relatively weak. Kraft paper production in the first quarter of 1983 was 4.3% below its year-ago level, although its rate was above that of total 1982. The weakness was concentrated largely in the multiwall sack and "other converting" grades; production of total bag and sack papers just about matched year-ago levels.

Production of paperboard in the first quarter of 1983 was 2.0% ahead of last year. Preliminary data for April suggest that the four-month total will show a somewhat stronger gain relative to 1982. The seasonally adjusted production rate in April 1983 is holding much nearer its first quarter level; last year, production was headed down.

The strongest paperboard sector has been containerboard. Production for domestic use showed a 2.3% gain over the first quarter 1982 total, which compares with the 2.9% gain in shipments of corrugated boxes reported by the Fibre Box Association for this same period. Production of kraft linerboard for export was particularly strong, 11.6% ahead of the first quarter 1982 total. Production of solid bleached paperboard for export was also relatively strong, at 560,000 tons per year, it was 4.4% over the year-ago total and just ahead of the record-high rate of 557,000 tons exported in 1981.

Production of boxboard for domestic use just about matched its year-ago total, but the rate of production was well above the average for 1982 as a whole. The strengths within this category have shifted somewhat from the patterns evident earlier in the year. Recycled coated folding boxboard now show greater gains over the year-ago level than the solid bleached grades. Among the other recycled grades, the major strength appears to be in tube can and drum stock and in panel board. Panel board is used largely in automobiles and mobile-type homes. Production of gypsum wallboard facings in the first quarter of the year, however, was only 0.6% above the year-ago level.

Imports/Exports, New Supply

Imports of paper, paperboard and products in the first two months of 1983 were 6.6% below the comparable 1982 total. However, while imports were within 1% of the January 1982 level, imports for February declined from the January level to fall 13% below the February 1982 total.

Newsprint imports, which account for over 80% of total imports of paper, paperboard and products, were down 12% during this period. The decline reflected both the increased availability of domestic newsprint in the U.S. and the continuing effect of reductions in inventories of newsprint by publishers. Inventories of newsprint by publishers at the end of February

Continued from Page 2

1983 were equivalent to 44 days of supply, compared to 58 days of supply at the end of February 1982. Newsprint consumption, however, has been in an unusually flat trend since the end of 1978, fluctuating within a range of 11-11.4 million short tons per year. In the first two months of 1983, newsprint consumption was at a seasonally adjusted rate of 11.3 million short tons per year.

Imports of printing and writing papers, by way of contrast, were 37½% above their year-ago total in the first two months of 1983, reflecting increases ranging from 21% to 94% in the separate major grades comprising this category. Some of these comparisons reflect the relatively low rate of imports in the first two months of 1982 but in all cases, the annual rate for the first two months of 1983 was well above the comparable average for the full year, 1982 (detailed data are shown on the table on page 9). Imports of packaging papers were up 35%, with both unbleached kraft papers and other packaging and industrial papers showing sizeable gains. The total value of imports in the first two months of the year was at an annual rate of $4.6 billion, 12% below the comparable 1982 rate.

Exports, however, were 14.8% higher in the first two months of this year compared with last year. Exports of paper were 21% lower, with declines concentrated in the newsprint and printing/writing papers. The major gainer in exports was unbleached kraft paper which, at 156,000 tons a year, was 68% above the comparable 1982 total.

Paperboard exports showed a 30% gain from the 1982 level, with its annual rate well above that for all of 1982. The major gains were in linerboard and bleached kraft paperboard, consistent with the trends shown in the API data on production of paperboard for export. The total dollar value of exports, at $3.76 billion per year, was 10% below the comparable 1982 level.

Both imports and exports of paper, paperboard and products normally rise from February to March and in estimating new supply for the quarter as a whole, we have assumed some increase in March over February levels.

The total new supply of paper and paperboard in the first quarter of 1983, based upon the 62.3 million tons per year (seasonally adjusted rate) produced, and API estimates of imports and exports in March, was at an annual rate of 65.2 million tons per year. This was about 1% above the comparable 1982 total. The first quarter rate compares to the record-high 65.7 million tons of new supply reached in 1981 and the earlier-high 64.4 million tons recorded in 1979.

Relative to the real gross national product (gross national product expressed in 1972 dollars) new supply of paper, paperboard and products in the first quarter of 1983 was equivalent to 43,800 tons per billion dollars. This was above the average

Continued on Page 12

Continued from Page 11

for total 1982 and compared well with the 43,700 tons per year average for 1981, and the 43,620 tons for 1980. It was below the 44,830 tons per billion dollars average of the 1976-1979 years.

Sales and Earnings

Data showing sales and earnings for 33 companies in the paper and allied products industry for the first quarter of 1983, show sales at $10.2 billion, 5.8% ahead of their comparable 1982 total, and net income after taxes, at $305 million, 0.3% below the year-ago total. With sales going up and earnings only holding steady, the margin on sales declined from 3.2% in first quarter of 1982 to 3.0% in the first quarter of 1983. In the first quarter of last year 6 companies reported net losses; in the first quarter of this year the number reporting losses was reduced to 5 companies. (These 33 companies accounted for approximately 66% of the total sales of all paper and allied products companies.)

Data are also available for 4 lumber and wood products companies. Net sales for these companies in the first quarter of 1983 were $2.82 billion, 12% above their year-ago total. Although 3 of the 4 companies showed gains in earnings, the drop in the fourth company's earnings was so large that the total income after taxes for the 4 companies dropped 17%. The margin on sales for these companies dropped 17%. The margin on sales for these companies dropped from 2.8% in the first quarter of 1982 to 2.1% in the first quarter of 1983.

Financial data for all paper and allied products companies (those companies with at least half their sales in paper and allied products) are reported on a quarterly basis in a government report titled "Quarterly Financial Report for Manufacturing, Mining and Trade Corporations".

As of the fourth quarter of 1982, this report was transferred from the Federal Trade Commission to the Bureau of the Census, Department of Commerce.

The Bureau of the Census reported net sales of all paper and allied products companies at $60.3 billion for 1982, 3.8% below the comparable 1982 level. Net income before taxes, at $2.2 billion was down 55%; net income after taxes, at $1.46 billion, was down 53%. The quarterly patterns for 1982 were more or less in line with the data shown in the February 1983 Monthly Statistical Summary for the publicly reported sales and earnings of 34 paper and allied products companies.

The table on page 10 shows 1981 and 1982 quarterly data for total paper and allied products companies, including details of income and balance sheet data similar to those published in the API's Annual "Statistics of Wood Pulp, Paper and Paperboard".

Paper Paperboard & Wood Pulp

MONTHLY STATISTICAL SUMMARY - Vol. 61 - No. 5 May, 1983

Paper and Paperboard Production: Fairly Steady

Preliminary data for April indicate that the two month moving average of seasonally adjusted data on paper and paperboard production was at 61.5 million tons per year. The average during the first four months of 1983 was 61.9 million tons per year. The pattern of production has been fairly steady, with only a minor move up in the February average.

Total production in the January-April 1983 period was 3.3% ahead of the corresponding 1982 total. April's production showed a much better comparison. Last year the rate of production had held relatively steady in the first three months and began to fall off in April. Thus, the preliminary April 1983 production total of 5.24 million tons was 4.5% ahead of the 5.02 million tons produced in 1982. Data for the early weeks of May indicate additional improvement in production gains over last year.

While the overall rate of paper production was fairly steady in the first four months of 1983, there were wide differences among the major grades. The printing/writing grades, for example, were particularly strong, with the four-month total some 6½% ahead of the comparable 1982 level. The major strengths within this group have been in the coated paper and uncoated free sheet grades: coated paper production showed a 7.4% gain over the year-ago level while uncoated free sheet paper output was up 8.1%. In both instances, the annual rates were at record-high levels.

The strength in the uncoated free sheet grades may well have significance beyond the paper industry. Two major components of this grade are computer printout paper and office copy paper. Both are widely used throughout the business economy, and their relatively strong demand may well be indicative of the strengthening trend of the total economy. It also suggests that the growing use of computers throughout the business structure is having a continuing positive effect on the demand for paper. The coated papers are used in magazines and commercial printing; strength in demand here may also be indicative of the strengthening trend in total business sales.

AMERICAN PAPER INSTITUTE • 260 Madison Avenue, New York, N.Y. 10016

Continued from Page 1

Newsprint production, by way of contrast, was relatively weak in April, falling to about 400,000 tons. This brought the total for the four months to a level some 3.6% below that of 1982. However, the annual rate at 5.1 million tons was above that of 1982 as a whole and compares well with the record-high 5.2 million tons produced in 1981. The decline in domestic production of newsprint reflected, to some extent, the continued reduction of inventories of newsprint held by publishers. Last year, publishers brought their inventories to high levels in anticipation of possible labor difficulties in Canada. This threat seems to have disappeared and newspapers are bringing their inventories down to more normal levels.

The unbleached kraft paper packaging grades also showed weakness. Production in the first four months of 1982, at 3.72 million tons per year, was 3.4% below the corresponding 1982 total. Other packaging and industrial converting papers, which include the specialty packaging and special industrial grades, are holding up well, showing a 2.9% gain over the comparable 1982 total.

Production of paperboard has followed a pattern similar to that of the total industry, with the rate of production in each month of the January-April period holding within 1.4% of its average level. For the entire January-April period, production of paperboard was 3.8% ahead of the corresponding 1982 total.

The gains in the production of the separate paperboard grades ranged from 0.9% for semi-chemical paperboard to 4.9% for kraft paperboard, with the unbleached kraft linerboard sector 5.9% above its year-ago level. The strength in linerboard reflected strength in exports as well as the increase in the demand for corrugated shipping containers. Total containerboard production for domestic use, at 18.6 million tons per year was 4.2% above 1982. This compared to the 2.9% gain in shipments of corrugated boxes reported by the Fibre Box Association for the January-April 1983 period.

Technical Note:

The Paperboard and Fourdrinier Kraft Board Groups conduct an annual survey of paperboard production by non-members of API, and revise their previous years' data to reflect the results of their survey. This survey regularly receives replies from nearly all the non-reporting producers, so that the final reported industry figures are based on data from approximately 98% of the total available capacity. The results of the revised data are presented in the table on page 3 and the yellow Industry Fact Sheet included with this report. The survey showed total paperboard production at 29,065,328 tons, 0.7% less than the previously reported total.

In addition, the Specialty Packaging and Industrial Paper

SOURCE: Producer Price Indexes -Bureau of Labor Statistics, U.S. Department of Labor # Computed by API

Continued from Page 2

Division of the API's Paper Group made a small revision in their 1982 data. In both instances the 1983 monthly production of these grades were revised to reflect the effects of the 1982 revisions. The revisions for 1983 had only a small effect on this year's first quarter figures on paper and paperboard production. However, the 1982 data now show paper and paperboard production at 59.5 million tons, about 0.3% below the previously reported total. The monthly data, by grade, for 1982 are available upon request from the API's Economic Department.

Imports/Exports and New Supply

Imports of pulp, paper and paperboard showed more than their usual seasonal strength in March, rising sharply above the February level. Imports of total paper, paperboard and products, for example, including the construction and wet machine board grades, amounted to 789,000 tons in March, 42% above the February level; last year the gain was 17%. Thus, the March 1983 total was 10.1% ahead of the March 1982 total, with the first quarter 1983 total 1½% ahead of the comparable 1982 level.

There was a particularly strong gain in imports of construction paper and board, probably reflecting the strength in the housing market. The first quarter rate, at 459,000 tons per year, was 122% ahead of its comparable 1982 level.

Continued on Page 11

Continued from Page 10

Imports of primary paper and paperboard, at an annual rate of 7.65 million tons, were 1.7% below that of the comparable 1982 period in the first quarter of 1983. Newsprint imports, at 6.4 million tons were down 7%. For 1982 as a whole, newsprint imports amounted to 6.53 million tons. The decline in newsprint imports was consistent with the pattern of domestic newsprint production, reflecting in part, as noted above, the effects of inventory reductions of newsprint.

There were sizeable gains in imports of the printing and writing papers. Total printing and writing paper imports were at the rate of 894,000 tons per year, 35% ahead of their comparable 1982 total. The major gains were in uncoated groundwood paper and coated and impregnated printing papers. However, where the uncoated groundwood paper imports, at 585,000 tons per year, accounted for 30% of the total new supply, the coated paper imports, at 108,000 tons per year, were only about 2% of the total new supply.

Imports of packaging and other papers were also up sharply, although at about 99,000 tons a year, they too, were less than 2% of the total new supply. Similarly, imports of paperboard in the first quarter of 1983 were up 62%, although the 145,000 tons per year rate was only 0.5% of the 28 million tons per year rate of total paperboard new supply.

Wood pulp imports also rose sharply from February to March 1983; last year there was a slight decline in the March level of wood pulp imports relative to that of February. Nonetheless, for the 1983 quarter as a whole, wood pulp imports were only 4% ahead of the comparable 1982 total.

Exports of paper and paperboard declined about 5% from February to March, but the quarterly total for primary paper plus paperboard was 3.7% ahead of the comparable 1982 level.

The total first quarter 1983 new supply of paper, paperboard and products (excluding the construction grades) was at the rate of 65.8 million tons per year. This was 1.7% ahead of the first quarter 1982 and 4.6% ahead of the average for 1982 as a whole.

The Department of Commerce recently reduced the level of the real gross national product for the first quarter of 1983. As a result, the first quarter 1983 ratio of new supply to real GNP now amounts to approximately 44,300 tons per billion dollars. This was above both the 1980 and 1981 average levels, but below

Continued on Page 12

Continued from Page 11

the annual totals for the years 1976-1979. Similarly, the new supply rate was above the annual 1980 and 1981 levels, but below the record-high 66.4 million tons reached in 1979.

Fibrous Raw Materials

Total wood pulp production (excluding defibrated and exploded wood pulp and screenings) as reported by the American Paper Institute was 0.4% ahead of its year-ago level in the first quarter of 1983. The first quarter annual rate of 51.5 million tons was 4% ahead of the 49.4 million tons produced in all of 1982, but below the 52 million tons produced in 1981. One of the reasons for this lower increase in wood pulp production relative to paper and paperboard production was the experience in the dissolving pulp sector. Dissolving pulp production, used outside the paper industry for such products as rayon, acetate, cellophane and explosives, was down by 3.3%, although here too the first quarter rate was above that for 1982 as a whole. The greatest strength among the wood pulp grades was in paper grade chemical pulps, where production in the first quarter of 1983 was 1.2% ahead of the year-ago level. In addition, imports of these grades of wood pulp were up 5%, and the total new supply showed a 1.6% gain.

Production of market pulp was also up, with the total showing a 1.2% gain and the paper grade chemical pulps a 2.2% gain. Although total pulp imports as reported by the Bureau of Census were up, the market pulp imports (which exclude the tied pulp coming from Canada) were down by nearly 3%, and the total market new supply down by 1.4%.

API data on total shipments of chemical paper grade market pulp in the U.S. show the first quarter 1983 total 5% ahead of the year-ago level, with shipments to the domestic market up 6% and exports up about 4%. Exports of market pulp to Western Europe and United Kingdom declined 6%, but this was offset by gains in shipments to Japan and the rest of the world.

API estimates of total consumption of fibrous materials at paper and board mills show wood pulp consumption in the first quarter of 1983 up less than 1%, but waste paper consumption up about 4%. The gain in waste paper consumption was accompanied by a sharp decline in inventories at paper and board mills: the level at the end of March 1983 was 22% below that of a year-ago. Inventories of market pulp at paper and board mills, by way of contrast, showed a 12% gain in this period, while market pulp inventories at pulp mills held flat.

& Wood Pulp

MONTHLY STATISTICAL SUMMARY - Vol. - No.

Paper and Paperboard Production: Again Moving Upward

Until May the current recovery in paper and paperboard demand had been something of a stop-and-go affair, with production strong in January and somewhat weaker in the February-April period.

Production broke out of the top side of that range in May. The trend level (two months seasonal adjusting moving average) was at 62.8 million tons per year, compared with 61.9 million tons per year during the January-April period. Production in May, at 5,541,000 tons represented the second highest monthly total, exceeded only by the 5,595,000 tons produced in March, 1981.

Preliminary data suggest that production in June is holding fairly close to the May rates. On the basis of this trend, total production in the first half of 1983, at the rate of about 62.4 million tons per year, would be within 1% of the record-high first half of 1981 rate.

Even more significant is the fact that the strength in production during the second quarter of the year may well be a forerunner of a strong second half. This is what happened in 1979, and to a lesser extent in 1981. In 1980 and 1982, by way of contrast, the second quarter production fell below the first quarter rate and production in the second half of those years tended to be relatively weak.

The strength in production has been fairly well spread throughout the grade structure. While year-to-date comparisons with 1982 levels may exaggerate the strength of the demand trend, inasmuch as the rate of production in the second quarter of 1982 moved sharply down from the first quarter rate, production of both paper and paperboard in the first 5 months of 1983 was about 5% ahead of the comparable 1982 totals.

Within the paper grades the strongest growth trends continued in the printing/writing grades. Total shipments of printing/writing papers in the first five months of 1983, as shown in the table on Page 3, was 8.2% ahead of the comparable 1982 level and marked a record-high total. The annual rate, at 16.9 million tons, compared with the 15.6 million tons produced in all of 1982 and 15.7 million tons in 1981. The printing/writing grades were the least affected by the 1982 recession.

Continued on Page 2

Continued from Page 1

Within the printing/writing sector, uncoated free sheet papers and coated papers showed particular strength, with both these grades running more than 9% ahead of their year-ago rates. Further, new orders for coated paper in the first five months of the year were 13% over year-ago levels; uncoated free sheet new orders gained 14%. In both instances, the order rate was above the shipment rate and the backlog of unfilled orders moved sharply upward. A major part of the coated papers is the publication grades used in magazines; as shown on the Industry Data Sheet, magazine advertising pages so far in 1983 were well above their comparable 1982 level. Major sectors of the uncoated free sheet papers include office copy papers and form bond papers. Demand for office copy papers is sensitive to the level of business activity, which now appears to be moving strongly upward, while the demand for form bond papers is also influenced by the still-growing trend in the use of computers.

Commercial printers are also major users of uncoated free sheet papers, buying a great deal of their paper through paper wholesalers. The Industry Data Sheet shows that the paper wholesaler's sales in the first four months of 1983 were well above their comparable year-ago level. While these are reported in current dollar terms, the increase in the tonnage volume of paper merchant's sales may have been greater than the increase in dollar sales.

Demand for packaging and industrial papers was also above year-ago levels, with most of the strength concentrated in the "other paper" production. This includes the specialty packaging and industrial grades.

The largest non-industrial sector of the paper industry is tissue paper, largely used for sanitary paper products. Production of these grades was at an annual rate of 4.7 million tons in the first five months of 1983, 5.7% over the comparable 1982 total. This compares well also with the record-high 4.5 million tons produced in 1979 and 1981.

Paperboard production, as noted earlier, was about 5% over year-ago rate. Among the paperboard grades, the major strength has been in containerboard production for domestic use, which gained 5.4%, and paperboard production for export, up 8.5%. The data are shown in the lower panel of the table on Page 3.

Nearly all the containerboard produced for the domestic market is used to manufacture corrugated shipping containers (fibre boxes). The Fibre Box Association reported that the rate of fibre box shipments in April and May moved sharply above its first quarter levels, with the May total about 11% over the volume shipped in May 1982. For January-May as a whole, fibre box shipments were 4.4% over their comparable 1982 total.

Continued from Page 2

Adjusted for seasonal/workday factors, the rate of box shipments in the first five months of 1983 was about 244 billion square feet per year, which compares well with the record-high rates of shipments during the 1978-1981 period, which ranged from 241 billion produced in 1980 to 251 billion produced in 1979.

Production of boxboard for domestic use has shown a somewhat weaker trend, rising only 2.3% from its year-earlier total. However, the annual rate of production, at 5.50 million tons, nearly matched the average for all of 1981 and was well above the 5.15 million tons produced in 1982.

The strength in production of paperboard for export evident earlier this year continued through April and May. Most of this strength was concentrated in exports of unbleached kraft paperboard, which were up 10.6% from their corresponding 1982 level. Production of semi-chemical paperboard for export showed an even stronger percentage growth, up 13.2%, but the volume was only 215,000 tons per year. Exports of solid bleached paperboard, at 553,000 tons per year, were a shade below their year-ago rate. Total paperboard exports, at 2.99 million tons per year, were topped only by the 3.3 million tons exported in 1980, when the demand from the People's Republic of China spirited.

Continued from Page 10

Expenditures for New Plant and Equipment

The Department of Commerce has recently published new data on expenditures for new plant and equipment by U.S. and non-farm business. The Department of Commerce now says that paper industry companies will spend $6.03 billion in 1983 for new plant and equipment. This is 1% higher than the $5.97 billion spent in 1982 but 10% below the 1980-1981 record-highs.

The $6.03 billion estimate for 1983 was about 1% below the earlier official estimate. The lowering of outlays was prevalent; total non-farm business expenditures on new plant and equipment which had originally been estimated to show a decline of 1.7% from 1982 to 1983, now showed a 3.4% decline. For all manufacturing the revision was from a 3.2% decline to a 5.8% decline, while for the non-durable goods industries as a whole their estimates moved down from a 2.4% decline to a 3.8% drop,.

There was, however, one major change in the Department of Commerce analysis of plant and equipment expenditures this year; price movements accounted for a significant part of the lower figures being reported. In its earlier reports, the Department had expected an increase in the average price of plant and equipment of 2.2%; it is now 0.4%. For the paper industry, we estimate that the 1% increase in capital expenditures will translate into a 1.5% increase in real terms.

The Department of Commerce also reported data on starts of new plant and equipment projects, and the carryover of expenditures committed but not yet spent. Starts of new plant and equipment projects by paper and allied products companies in the first quarter of 1983 amounted to $1.59 billion, a shade higher than the quarterly average for all of 1982. The carryover increased from $6.36 billion at the end of 1982 to $6.44 billion at the end of March 1983.

Imports/Exports and New Supply

Both imports and exports of paper, paperboard and products in April showed a somewhat stronger than seasonal trend. Imports at $658 million, showed a less than usual decline from the March level and were above the totals for January and February. Exports, at $386 million, were better than 10% above the March level and at a new high for the year.

For the entire January-April period, new supply of paper and paperboard was at a rate of 66.1 million tons per year. This compares with the 62.9 million tons of new supply for all of 1982 and 65.6 million tons for 1981. The record-high was 1979, when new supply amounted to 66.4 million tons. In that year, however, imports accounted for a larger share of the new supply. Production was about 1.4 million tons below the production rate of the January-April 1983 period, but imports totalled 8.7 million tons compared to the 7.7 million tons per year rate of the 1983 period. Exports were only 3.6 million tons per year, compared to the 4.3 million tons per year rate for the 1983 period.

Continued from Page 11

If current trends in production, imports and exports hold to the end of the quarter, the total new supply of paper, paperboard and products in the first half of the year would be about 66 million tons per year, almost matching the 1979 record-high. At this rate, the new supply would be equivalent to about 44,000 tons per billion dollars of the real GNP, compared to the 44,700 tons per billion dollars of real GNP average for the 1977-1979 period.

The increase in both the production and new supply of paper and paperboard from the first four months of 1982 to the first four months of 1983 also compares quite favorably with that of total industrial production. Where total manufacturing output in the first four months of 1983 barely matched its year-ago total, both production and new supply of paper and paperboard showed sizeable gains.

This comparison is detailed on the Industry Data Sheet. New supply of paper, as shown there, gained an estimated 4.8% in the first five months of 1983 over the comparable 1982 level, while the proxy for paper demand, which is an average of indexes of production of non-durable goods, disposable income and total printing and publishing activity, each weighted according to its relative importance to the paper industry, showed only a 0.9% gain. Similarly, the production of paperboard for domestic use gained 4.5%, compared to a 1.1% increase in the composite index of consumer goods, equipment and materials output, weighted according to their relative use of paperboard. Comparisons with 1982 may result in a somewhat exaggerated strength of the current trend.

Market Wood Pulp

The market wood pulp sector of the paper industry continues to follow a fairly strong trend. Total production of chemical paper grade market pulp in the first four months of 1983, at 4.9 million tons per year, was 4.2% ahead of its comparable 1982 level. This increase largely reflected a gain in export demand: exports in the first four months of the year were at an annual rate of 2.57 million tons, 5.6% over their comparable 1982 level. The increase in export demand reflected relatively large increases in shipments to Japan and the countries outside Western Europe; shipments to Western Europe were up about 1%.

New supply of chemical paper grade market pulp in the first four months of 1983, at 4.66 million tons per year, just about matched its comparable year-earlier rate, but was below the 1981 new supply total of 4.9 million tons. In view of the relatively strong increase in printing/writing paper production, normally a good indicator of the domestic demand for market pulp, the 1983 market pulp pattern suggests some shift in domestic use of market pulp, with integrated pulp replacing domestic market pulp.

Paper Paperboard & Wood Pulp

MONTHLY STATISTICAL SUMMARY - Vol. 61 - No. 7 JULY 1983

Paper and Paperboard Production: Up

Preliminary data indicate that paper and paperboard production in the second quarter of 1983 inched ahead of the last previous peak and achieved a new high of 16.21 million tons. (The previous second quarter peak was reached in 1981 and totalled 16.16 million tons.)

Total production in the first half of 1983 was at a seasonally adjusted annual rate of 62.6 million tons per year, 5.6% ahead of the comparable 1982 total. The 1983 first half rate, however, fell about 0.5% below the record reached in the first half of 1981.

Comparison of the 1983 trend with that of 1981 rather than 1982 generally yields a better prospective of the underlying trend of demand for paper and paperboard: in 1982, the production of paper and paperboard moved in a downtrend during the last three quarters of the year; production is now in a cyclical recovery phase so that comparisons with 1982 data tend to exaggerate the basic growth trend. In the industry, for example, the production of paper and paperboard in the second quarter of 1983 was 8% above the comparable 1982 level, but only 0.3% ahead of production in the second quarter of 1981, when activity was in a comparable cyclical uptrend.

The strength in paper and paperboard production in the first half was evident throughout the grade structure. Production of printing/writing papers in the first half of 1983, as shown in the table on page 3, was 8.7% above the relatively good performance in the 1982 period.

Uncoated free sheet paper output was 9.8% above its comparable 1982 total, and 6% ahead of its first half 1981 record-high. The major gains were in bond and similar papers, used largely for office copy and computer printouts.

Production of coated papers was up 9.2% from the first half of 1982. Coated papers were one of the few grades to show a gain in 1982 production over 1981. The major markets for coated papers are in magazines and commercial printing.

Continued from Page 1

As reported in the enclosed industry data sheet, magazine advertising pages in the first five months of 1983 were 4.6% ahead of the comparable 1982 level. The table also shows that wholesalers' sales of paper and products in current dollars, were up 3%. After adjustment for prices as reported by the Bureau of Labor Statistics, the real volume of sales was up at least 6%. The table also shows that inventories at paper wholesalers on a current dollar basis were within 0.4% of their year-ago level; adjusted for reported BLS price changes, they suggest a small increase in the tonnage of inventories held by paper merchants.

Among the paperboard grades, the largest gains relative to a year-ago continued in the containerboard sector. Production of containerboard for domestic use in the first half of 1983, for example, was 6.2% ahead of the year-ago production. This compared to a 5.3% increase in fibre box shipments, as reported by The Fibre Box Association. However, where the rate of fibre box shipments in the first half of 1983 was a shade above the average reached in 1981, the production of containerboard for domestic use fell a little short of it's 1981 average rate.

Inventories of containerboard at mills and plants showed a small increase in June. The inventory trend during the first half of the year has been relatively flat, although the June level was a bit below that of the beginning of the year and about 6% below the June 1982 level. These data are also shown on the industry data sheet.

Production of paperboard for export continued to show strength. For the first half of 1983, the rate of such production was in excess of 3 million tons per year, 9% above the first half 1982 total which, in turn, was slightly above the 1981 total.

The gain in production for export was centered on the containerboard grades, with the rate of production of unbleached kraft linerboard for export, at 2.2 million tons per year, up 10.7% while the rate of production of semichemical paperboard for export at 0.2 million tons per year, was up 8.3%. Relative to the first half 1982 level, production of solid bleached paperboard for export shows only a 0.6% increase; however, the 568,000 tons per year rate was above both the 1981 and 1982 average levels, as shown in the table on page 3.

Imports, Exports and New Supply

Imports of paper, paperboard and products moved upward from April to May 1983, but the May level was still below that reached in March. For the January-May period, total imports

Continued from Page 2

were only 1.4% ahead of their 1982 level, with newsprint imports down 3.7%. Although newsprint accounted for 83% of the total imports of total paper, paperboard and products in the first five months of 1983, the 3.7% decline in imports was offset by increases in imports of the other grades of paper and paperboard. Imports of printing/writing papers, for example, at 917,000 tons per year, were up 34%, while imports of packaging papers, at 98,000 tons per year, were up 28.6%. Paperboard imports, at 160,000 tons per year, were up 81%. These data are shown in the table on page 9.

Exports of paper, paperboard and products in May were also above the April level, and at a high for the year. Although exports of the paper grades were down 17%, paperboard exports advanced. For the first five months of 1983 total exports were 6.9% ahead of their comparable 1982 level.

Total new supply of paper, paperboard and products, in the second quarter of 1983, was at an estimated rate of 66.2 million tons per year, a shade higher than the 65.8 million tons per year rate achieved in the first quarter. At 66 million tons per year, the first half rate was 5.1% above the 62.8 million ton rate per year of new supply achieved in the first half of 1982, and only a shade below the 66.1 million tons per year rate achieved in the first half of 1981.

The Department of Commerce made its annual revision of gross national product accounts in mid-July indicating that the gross national product in 1972 prices (real GNP) in the last few years was slightly higher than had been earlier estimated. The new data show that the real GNP in the first half of 1983 was 1.2% ahead of the comparable 1982 level. The larger 5.1% gain in new supply of paper, paperboard and products in this same period is typical of the upswing of a business cycle. In the downswing of the cycle, new supply declined more than real GNP.

The ratio of new supply to real GNP in the first half of 1983 was 43.900 tons per billion dollars, a little higher than the estimated ratio in the first half of 1981, which was 43,600 tons per billion dollars.

Wood Pulp

Revised data on the production of wood pulp reported by the Wood Pulp Division of the API's Pulp, Materials & Technology Group show total wood pulp production in the first five months of 1983 up 2% from the comparable year-ago level. The revision was largely in the chemical paper grades, with production now reported up 3% from the year-ago level. At an annual rate of 41.9 million tons, the rate was above the average for both 1981 and 1982.

Production of chemical paper grade market pulp showed even

Continued on Page 12

Continued from Page 11

greater strength, rising 6.3% above the comparable 1982 level in the first five months of 1983. The 5.1 million tons per year rate compared favorably with the 4.9 million tons exported in all of 1981.

Imports and exports of chemical paper grade market pulp also showed strong gains, with imports up 5.9% and exports up 8.1%. As a result, new supply of these grades was up 5.1%, to 4.8 million tons per year. However, this rate was below that realized in 1981 as a whole.

The table on page 5 also shows data on inventories of market pulp; at the end of May inventories at pulp mills were 1% below their year-ago level, while inventories at paper and paperboard mills were up 23%. This is a normal pattern in a period of rising demand for market pulp.

Sales and Earnings

The increase in production of paper and paperboard in 1983 over the 1982 levels was reflected in both sales and earnings. Net sales of 30 paper and allied products companies in the second quarter of 1983, as reported in the press, amounted to $10.6 billion, 10.0% above the comparable 1982 total. This brought the increase in sales for the first half of the year to 8.1%.

These same companies earned $381 million, after taxes, in the 1983 second quarter, 14% above the cyclically depressed 1982 level. For the entire first half, the gain in earnings amounted to 25%. The margin on sales for these companies in the first half of 1983 was 3.4%, compared to 2.9% in the first half of 1982.

A similar analysis of four forest products companies with significant holdings in the pulp and paper industry showed second quarter 1983 sales up 20%; earnings after taxes up 40%. The second quarter 1983 sales margin for these companies was 3.9% compared to 3.3% in the first quarter of 1983.

The table at the bottom of page 10 presents the detailed data for these two groups of companies.

MONTHLY STATISTICAL SUMMARY - Vol. 61 - No. 8 **August, 1983**

Paper and Paperboard Production: Climbing

Paper and paperboard producers kept their July shutdowns to a minimum. Total production, at 5.1 million tons, was about 12% above the cyclically-depressed year-ago level and some 3% ahead of the July 1981 level. The seasonally adjusted rate of production in July 1983 moved above the 65 million tons per year rate.

A better measure of the trend position of paper and paperboard production is the two-month average of the seasonally adjusted data. The June-July 1983 average was at the rate of 63.9 million tons per year. Preliminary data indicate that the seasonally adjusted rate for the month of August may move off the July peak, but the July-August average will probably show a further gain, to bring the rate above 64 million tons per year. (A strike at a large paperboard company may hold the production rate a little below this level.)

The seasonally adjusted rate of production in the first seven months of the year was close to 63 million tons per year, 6.6% ahead of the comparable 1982 rate, with paper production showing a gain of 6.1% and paperboard production 7.1%.

Among the paper grades, the printing/writing papers continue to show the strongest gains; total printing/writing paper shipments in the January-July period were 9.2% ahead of their comparable 1982 level. Within the printing/writing complex, major strengths continue in the coated papers - up 10.5% - and uncoated free sheet - up 10.1%. The gain in coated paper shipments reflects the heavy demand for publication grades by magazine publishers, and for the better grades of coated papers by commercial printers. The major sources of strength in the uncoated free sheet papers continue in the bond and writing sector, supported by rising demand for office copy and computer papers, as well as relatively strong demand for the printing grades.

Newsprint production in the U.S. for the first 7 months of 1983 was about 1.5% below the year-ago total. Imports were higher as reflected in a gain of 1.6% in shipments of newsprint

Continued from Page 1

from Canada during the first 6 months of the year and a rise of 19,000 tons, 148%, in imports from other countries. Thus, total new supply of newsprint in the first half of 1983 showed a gain of just under 1%. Perhaps more important, is the report by the Canadian Pulp and Paper Association that the rate of newsprint consumption by publishers in the May-June 1983 period pulled out of its long-term range of 11.0 to 11.4 million tons per year and moved up to a seasonally adjusted rate of 11.8 million tons per year. The May-June rate of consumption of newsprint by U.S. publishers reached a new high.

The other grades of paper also showed gains over their comparable year-ago totals. Tissue paper output was up 7.2% in the January-July 1983 period, while packaging and industrial grades showed a 3% increase in production. Within this sector, the increase was concentrated in the bleached kraft and special industrial papers, where a gain of 7.1% was recorded.

The table on page 3 shows some unusual patterns in paperboard production. In particular, the production of "all other" paperboard for domestic use, at a 4.15 million ton per year rate, was 8.1% over its year-ago level. These are paperboard grades other than containerboard and boxboard but they do include some packaging grades, such as tube can and drum stock. This sector also includes gypsum wallboard facings, which rose 10% over their year-ago level, and panelboard, used in automobiles and housing, which was up 26%. In addition, the miscellaneous non-packaging uses of paperboard showed a strong gain.

Paperboard production for export gained 9.6% over its comparable year-ago level in the first 7 months of 1983. At 3 million tons per year, the rate compares with the 3.3 million tons exported in the record year 1980.

Production of containerboard for domestic use rose 7.5% from its year-ago level. This compares with the 5.3% increase in fibre box shipments reported by the Fibre Box Association for that same period. Fibre box shipments have been in a relatively steep uptrend in recent months. The seasonally adjusted rate in the June-July period averaged 260 billion square feet per year, considerably higher than the 251 billion square feet shipped in the record-high year of 1979.

Imports, Exports and New Supply

Total imports of paper, paperboard and products rose sharply from May to June, to 793,000 tons, the high for the year. In both 1981 and 1982 the June level of imports declined from the May level. Total imports in the first half of 1983 were up by 6.1%, with paper showing a 4% gain, paperboard 74% and converted

Continued from Page 2

products 31%. Tonnages in the latter two categories are relatively small with only 161,000 tons per year of paperboard imported and 134,000 tons per year of converted products imported.

The increase in imports in June brought the quarterly total to a rate of 8.6 million tons per year. Exports of paper, paperboard and products in June declined slightly, retreating to the April level; the second quarter 1983 export rate was 4.7 million tons per year, the highest rate of exports since the first half of 1981.

The strength in production and imports brought the second quarter new supply to an annual rate of 66.7 million tons per year. This compares to the 66.4 million tons average rate achieved in the record year 1979.

The second quarter 1983 new supply was 1.4% above the first quarter rate and compares with the 2.2% increase in the real gross national product. The 44,000 tons per billion dollar average for the first half of 1983 was a marked recovery from the 1982 low of 42,350 tons and was above the average level of both 1980 and 1981.

Analysis of the new supply trends of the major grades of paper and paperboard showed that the strongest gains relative to real GNP occurred in the printing/writing grades, where the first half 1983 ratio moved to a new high. Tissue paper new supply also moved faster than real GNP in the first half 1983, but the packaging grades of paper continued to show a declining trend relative to real GNP.

New supply of all the major paperboard grades moved up faster than real GNP in the first half of 1983. For the most part, however, the average was below that achieved in 1981. One exception in recycled paperboard where the ratio of new supply to real GNP did match the 1981 average in the first half of 1983.

Wood Pulp

Production of wood pulp in the first half of 1983 was at the rate of 52.2 million tons per year, 2.6% above the corresponding 1982 level and slightly higher than the 52.0 million tons per year average for all of 1981. The 1981 production level was itself a record-high. Imports of wood pulp were quite strong, gaining 9.9% from the year-ago level but at 3.9 million tons per year during the first half they were below the 4.1 million tons average for 1981.

Continued on Page 12

Continued from Page 11

Total production of chemical paper grade pulp in the first half of 1983 was about 3.4% higher than in the first half of 1982 and above the 1981 average. Production of chemical paper grade market pulp showed a somewhat greater gain: at 5.1 million tons per year the rate was 5% over the first half 1982 level and compared favorably with the 4.86 million tons produced in 1981.

Imports of market pulp (which exclude the "tied" pulp from Canada) gained 9.9%, matching the gain in total imports. Exports of these grades of market pulp, reported by the API as production for export, showed a 9.0% gain; at 2.75 million tons per year the rate was 7.7% over the export rate for all of 1981. This brought the new supply rate in the first half of 1983 to 4.8 million tons per year, 5.2% over the comparable 1982 level but about 3% below the 4.94 million tons of new supply available in 1981.

Printing/writing papers are the major markets for chemical paper grade market pulp, production of which was up 9.2% and above the 1981 level. The smaller gain in new supply of chemical paper grade market pulp suggests that those integrated producers who normally buy market pulp are now purchasing a smaller percentage of their total requirements than they did in 1981.

Sales and Earnings

The table on page 10 shows data on sales and earnings for 33 paper and allied products companies, 4 forest products companies with major holdings in the paper industry, 11 other companies with major holdings in the paper industry and 5 Canadian paper companies. The Canadian data are shown in Canadian dollars.

(A similar table covering 30 paper and allied products companies presented in the July 1983 Monthly Statistical Summary showed an incorrect figure for the first quarter 1982 earnings. The correct figure was $315 million, which was slightly above the $307 million for the first quarter of 1983. The first half 1983 gain in earnings thus amounted to 6.0%. The addition of 3 more paper and allied products companies resulted in a slightly higher gain in the earnings total for the first quarter of 1983 over the comparable 1982 figure, and brought the increase in the first half to 9.0%, compared to an 8.2% gain in sales. Thus, the first half 1983 margin on sales for these 33 companies amounted to 3.4%, compared to 3.3% in 1982.)

MONTHLY STATISTICAL SUMMARY - Vol. 61 - No. 9 **September, 1983**

Paper and Paperboard Production: Record-High Rates

August paper and paperboard production continued its strong uptrend in August. The August production total, as shown in the table on page 3, was 5,618,000 tons, marking the first time the monthly total moved above 5.6 million tons.

The seasonally adjusted rate of production held near the July level of 65.3 million tons a year in August, so that the trend level (average of the July and August seasonally adjusted data) was 65.1 million tons per year. The rate of total paper and paperboard production in the first 8 months of 1983 averaged 63.2 million tons per year, 6.9% ahead of the comparable 1982 rate and well above the 1981 high of 62.3 million tons.

The major strengths continued to be in the printing and writing paper grades, with production moving above 17 million tons per year for the January-August 1983 period, 9.4% ahead of its comparable year-earlier rate and marking the first time that the rate moved above the 17 million-ton level. Within this group, the strongest production trends continued to be in coated papers -- up 10.8% -- and uncoated free sheet papers -- up 10.0%. New orders for these two grades have been coming in well above the shipments level, bringing the backlog of unfilled orders for coated papers 67% ahead of its year-ago level as of the end of August 1983 and the backlog of uncoated free sheet papers 85%. The strength in demand for coated papers continues to reflect strengths in shipments to its major markets -- magazines, other periodicals and commercial printing. Shipments of uncoated free sheet papers to such major markets as office reprographics, business forms converters, and stationery & tablet converters all showed gains above that for the grade as a whole. Shipments to book publishers, however, have not quite kept pace with their 1982 rate.

Continued on Page 2

Continued from Page 1

The rate of newsprint production made a slight recovery in July and August, to bring the year-to-date total back to its year-ago level. Stocks of newsprint at publishers leveled out, with the July rate of 45 days of supply equal to the rate of the first two months of the year. In July 1982, however, publishers had 57 days of supply on hand. Consumption of newsprint at publishers moved to a new high in July 1983 of 11.9 million short tons per year.

The rate of production of packaging and similar paper also strengthened in July and August, with the August trend rate at 5.8 million tons per year. For the entire January-August period, production of these grades was at an annual rate of 5.5 million tons, 4.4% ahead of its year-ago rate.

The strength evident in the various grades brought the trend rate of total paper in August 1983 to a record-high 33 million tons per year. For the entire 8-month period, the seasonally adjusted rate of paper production averaged 32.2 million tons per year, 6.6% ahead of its year-earlier rate and 3.6% above its 1981 high.

While total paperboard production has shown a larger gain than paper in the January-August period, up 7.3% from its comparable year-earlier level, the seasonally adjusted average production rate of 31.1 million tons per year remained a little below the 1981 high of 31.2 million tons. As the table on page 3 shows, production of containerboard for domestic use gained 7.9% over its year-ago level; boxboard 3.1%. In each instance the average rate was below its respective 1981 rate. However, production of other paperboard for domestic use -- largely non-packaging grades such as gypsum wallboard facings and panelboard -- were up 9%, with the year-to-date rate above that of 1981. This category also includes tube, can and drum stock; production of the recycled grades of this category has been particularly strong so far this year. Paperboard production for export continued to hold the gains evident earlier this year, with the 8-month 1983 total 9.1% above its year-earlier level at a rate of nearly 3 million tons per year. This compares to the 2.6 million tons average for 1981 and 1982.

SOURCE: Producer Price Indexes -Bureau of Labor Statistics, U.S. Department of Labor # Computed by API

Continued from Page 2

The 7.9% gain in production of containerboard for domestic use compares to the 6% gain in shipments of fibre boxes reported for this same period. The August level of inventories of containerboard at mills and plants fell 77,000 tons from the July level to 2.41 million tons. This was equivalent to 6.7 days of supply and represented a decline of 175,000 tons since the beginning of this year.

Capital Expenditures

The Department of Commerce recently reported that expenditures for new plant and equipment by paper and allied products companies will total $6.19 billion in 1983, 3.7% above the 1982 total, but 7.9% below the 1981 high. This new estimate represents a 2.7% increase over the earlier estimate and suggests that these expenditures will remain near their first half 1983 average level during the second half of the year.

Continued from Page 10

The 1983 increase in expenditures by paper and allied products companies contrasts with a 1.2% decline expected for total non-durable goods, a 4.8% decline for all manufacturing companies and a 3.1% decline for total non-farm business. In real terms, that is, adjusted for changes in the estimated prices of new plant and equipment, expenditures in 1983 will be somewhat stronger than indicated by the change in the current dollar estimates, reflecting the Department of Commerce's expectation of a small decline in the average prices.

Commerce also reported data on the starts and carryover of expenditures. As of the end of the second quarter of 1983, the carryover by paper and allied products companies amounted to $6.36 billion, about equal to the year-end 1982 level and equivalent to a little more than one-year's expenditures.

Data on capital appropriations and expenditures recently published by The Conference Board also indicate that paper and allied products companies will maintain expenditures on new plant and equipment near current levels for the next two quarters or so, but point to some decline after that. The Board's data, which summarize expenditures and appropriations for the largest firms in the industry, showed that appropriations in 1982 were slightly above expenditures. In the first two quarters of 1983, however, total appropriations (adjusted for cancellations) were 27% below the expenditure total, bringing the backlog from $5.1 billion at the start of that period to $4.6 billion at its close. The backlog was equivalent to more than one-year's expenditures of these large companies, helping to maintain near-term stability in outlays but, based on the relatively low new appropriations, a potential decline in 1984 is likely. However, the strength in paper and paperboard production evident in 1983 may well restore cash flow sufficiently to stimulate an upturn in new appropriations soon and thus forestall the decline.

Continued on Page 12

Continued from Page 11

Raw Materials

Production of wood pulp in the first 7 months of 1983 was at an annual rate of 51.8 million tons, 3.6% ahead of the comparable 1982 rate, but slightly below the rate of production for the full year 1981. Production of total paper grade chemical wood pulp, however, was 4.5% above its comparable 1982 rate and slightly above its 1981 average. Groundwood pulp production was down a bit as was the production of semi-chemical pulp.

The market wood pulp grades showed a stronger trend, with total production up 8.9% in this period and the paper grades of chemical pulp up 7.7%. The paper grades of market pulp normally follow a stronger trend than total wood pulp during the upswing of the business cycle.

Imports of market pulp, largely from Canada, were also strong, rising 17% from their year-earlier level. Although exports were up 8.5%, new supply of chemical paper grade market pulp showed a strong 12% recovery from the comparable year-earlier rate. The average rate for this period matched 1981 average but was still 1.5% below the record-high 1980 rate.

The 1983 gain in shipments of market pulp over its year-earlier rate also reflected changes in pulp inventories at consuming mills: a reduction of 32,000 tons in the first eight months of 1982 compared to a gain of 7,000 tons in the 1983 period.
